

THE NEXT GENERATION OF SUPERIOR GUESTROOM CONTROLS

INNCOM e7 Thermostat

Building upon the current industry-defined INNCOM offering, Honeywell integrated the newest technology and a sleek modern look to give the industry a totally modern, future-proofed thermostat that goes beyond comfort. The new INNCOM thermostat has a completely redesigned look and a delightful welcoming user interface providing the guest with a simple-to-use thermostat for comfort, energy management and so much more. The new INNCOM thermostat provides comfort and reduces in-room energy costs by up to 35% based on occupancy and it offers a simple way to integrate with most HVAC solutions. In addition, the thermostat serves as the main component of the INNCOM technology enabling platform that provides integrations with more third party technologies which range from property management systems to in-room voice control. When used in a networked installation, the new thermostat provides real-time and trended data for INNcontrol 3 to furnish room status, energy management, equipment alarm reporting, integration to PMS, BMS and other systems, which allows the property to proactively manage the environment to ensure the most satisfying in-room experience.

Features

GUEST EXPERIENCE

- Modern industrial design, small footprint
- Large tactile keys with backlit keypad
- Wake on approach
- Clear communication to guest

ENERGY MANAGEMENT

- Compatible with virtually every HVAC system
- Less than 3-year payback
- Title 24 compliant
- Occupancy-based energy strategies

Network Integrations

PMS Integration: The new thermostat easily integrates with all major PMS and PoS systems on the market to create a seamless solution for both energy savings and guest comfort. The PMS system triggers a “Rented” room state: The thermostat brings the temperature to a comfortable setting as guests head to the room. During check-out, the PMS system triggers an “Unrented” room state, and the Thermostat goes into a deeper setback mode, curtains are closed, lights are turned off, televisions are disabled.

Central Electronic Locks: INNCOM partners with the leading door lock manufacturers on the market such as Dormakaba, Timelox, Salto, and Hafele. The lock can communicate with the INNCOM Thermostat to participate in the in-room occupancy logic for energy savings, and INNCOM provides the central INNCOM network and integration platform, to minimize infrastructure costs.

Lighting Control: provides the occupancy detection for INNCOM’s elegant lighting controls to provide delightful guest welcoming scenes, and reduces utility bills, extends bulb life, and conserves energy.

Drape Control: When coupled with a drupe control solution, the core thermostat is responsive to temperature, sunlight and occupancy, and can automate the drapes to not only create a delightful experience to the guest, but also contribute to sustainability and reduce energy consumption in the guestroom.

Third Party Integration: The Thermostat can easily integrate with partners such as Crave and Intellity for in-room services such as massages, spa amenities, special events, shopping, local highlights and control of the entire room from a tablet.

Voice Control: The thermostat offers the first commercial-grade voice control solution designed for hospitality using Amazon Alexa voice control for temperature, lighting, drapery and amenity functions.

Operational Efficiency:

Smart wall plate reduces the total cost of ownership by minimizing room down time by capturing the thermostat configuration and uploading the configuration to a replacement thermostat automatically

Occupancy reporting supports maintenance workflow

Wired or wireless options for easy installation in new construction or retrofit

Analytics

Understanding the needs of your guests help to improve your quality. Through integration with INNCOM's INNcontrol™ 3 platform, the thermostat provides the data to support occupancy reports, equipment alarms, and other pro-active information to make well-informed investment decisions and improve asset value and Rol.

Available in Ice White or Black Onyx
